SQL Subqueries - Lab Assignment #2

Introduction

Now that you've seen how subqueries work, it's time to get some practice writing them! Not all of the queries will require subqueries, but all will be a bit more complex and require some thought and review about aggregates, grouping, ordering, filtering, joins and subqueries. Good luck!

Objectives

You will be able to:

Write subqueries to decompose complex queries

CRM Database ERD

Once again, here's the schema for the CRM database you'll continue to practice with.

Connect to the Database

As usual, start by importing the necessary packages and connecting to the database data2.sqlite in the data folder.

```
In [1]: # Your code here; import the necessary packages
   import sqlite3
   import pandas as pd

In [2]: # Your code here; create the connection
   conn = sqlite3.Connection("data/data.sqlite")
```

Write an Equivalent Query using a Subquery

The following query works using a JOIN . Rewrite it so that it uses a subquery instead.

```
SELECT
    customerNumber,
    contactLastName,
    contactFirstName
FROM customers
JOIN orders
    USING(customerNumber)
WHERE orderDate = '2003-01-31';
```

```
In [11]: # Your code here
q1 = """
```

```
SELECT
    customerNumber
    , contactLastName
    , contactFirstName
FROM customers
WHERE customerNumber IN (
    SELECT customerNumber
    FROM orders
    WHERE orderDate = '2003-01-31'
)
;
;
"""
pd.read_sql(q1, conn)
```

Out[11]:

customerNumber contactLastName contactFirstName

0 141 Freyre Diego

Select the Total Number of Orders for Each Product Name

Sort the results by the total number of items sold for that product.

Out[445]:

	productName	SUM(quantityOrdered)
0	18th Century Vintage Horse Carriage	907
1	18th century schooner	1011
2	1900s Vintage Bi-Plane	940
3	1900s Vintage Tri-Plane	1009
4	1903 Ford Model A	883
•••		
104	The Mayflower	898
105	The Queen Mary	896
106	The Schooner Bluenose	934
107	The Titanic	952
108	The USS Constitution Ship	1020

Select the Product Name and the Total Number of People Who Have Ordered Each Product

Sort the results in descending order.

A quick note on the SQL SELECT DISTINCT statement:

The SELECT DISTINCT statement is used to return only distinct values in the specified column. In other words, it removes the duplicate values in the column from the result set.

Inside a table, a column often contains many duplicate values; and sometimes you only want to list the unique values. If you apply the DISTINCT clause to a column that has NULL, the DISTINCT clause will keep only one NULL and eliminates the other. In other words, the DISTINCT clause treats all NULL "values" as the same value.

```
In [479...
```

```
# Your code here
# Hint: because one of the tables we'll be joining has duplicate customer numbers, you s
q3 = '''
WITH mergedTables AS (
   SELECT DISTINCT
        , f.city AS cities
        , f.officeCode AS officeCodes
    FROM customers a
    JOIN orders b
        ON a.customerNumber = b.customerNumber
    JOIN orderdetails c
       ON b.orderNumber = c.orderNumber
    JOIN products d
        ON c.productCode = d.productCode
    JOIN employees e
       ON a.salesRepEmployeeNumber = e.employeeNumber
    JOIN offices f
       ON e.officeCode = f.officeCode
SELECT DISTINCT
   productName
   , COUNT (DISTINCT customerNumber)
FROM mergedTables
GROUP BY productName
ORDER BY COUNT (DISTINCT customerNumber) DESC
1.1.1
pd.read sql(q3, conn)
```

Out[479]:

productName COUNT(DISTINCT customerNumber) 103 1954 Greyhound Scenicruiser 20 104 1958 Chevy Corvette Limited Edition 19 105 18 2002 Chevy Corvette 106 1969 Chevrolet Camaro Z28 18 107 1952 Citroen-15CV 18 108 1949 Jaguar XK 120 18

Select the Employee Number, First Name, Last Name, City (of the office), and Office Code of the Employees Who Sold Products That Have Been Ordered by Fewer Than 20 people.

This problem is a bit tougher. To start, think about how you might break the problem up. Be sure that your results only list each employee once.

```
In [473... # Your code here
         q4 = '''
         WITH mergedTables AS (
            SELECT
                 , f.city AS cities
                 , f.officeCode AS officeCodes
             FROM customers a
             JOIN orders b
                 ON a.customerNumber = b.customerNumber
             JOIN orderdetails c
                ON b.orderNumber = c.orderNumber
             JOIN products d
                ON c.productCode = d.productCode
             JOIN employees e
                ON a.salesRepEmployeeNumber = e.employeeNumber
             JOIN offices f
                ON e.officeCode = f.officeCode
         SELECT *
         FROM (
             SELECT
                 employeeNumber
                 , productName
                 , lastName
                 , firstName
                 , cities
                 , officeCodes
                 , COUNT(DISTINCT customerNumber)
             FROM mergedTables
             GROUP BY productName
             HAVING COUNT(DISTINCT customerNumber) < 20</pre>
         GROUP BY employeeNumber
         pd.read sql(q4, conn)
```

Out[473]:

:		employeeNumber	productName	lastName	firstName	cities	officeCodes	COUNT(DISTINCT customerNumber)
	0	1166	1949 Jaguar XK 120	Thompson	Leslie	San Francisco	1	18
	1	1370	1958 Chevy Corvette Limited Edition	Hernandez	Gerard	Paris	4	19

Select the Employee Number, First Name, Last Name, and Number of Customers for Employees Whose Customers Have an Average Credit Limit Over 15K

```
q5 = '''
WITH mergedTables AS (
   SELECT
        , f.city AS cities
        , f.officeCode AS officeCodes
    FROM customers a
    JOIN orders b
       ON a.customerNumber = b.customerNumber
   JOIN orderdetails c
       ON b.orderNumber = c.orderNumber
   JOIN products d
       ON c.productCode = d.productCode
    JOIN employees e
       ON a.salesRepEmployeeNumber = e.employeeNumber
    JOIN offices f
       ON e.officeCode = f.officeCode
SELECT
  employeeNumber
   , lastName

Summary

In this lesson, you got to practice some more complex SQL queries, some of which required subqueries. There's still plenty more SQL to be had though; hope you've been enjoying some of these puzzles!
